DJES Aim and Scope

DJES Journal Aim

The journal's mission is to bring together thought, academic research and corporate practice in all areas of *Engineering and Technology* in a reader-friendly format. The journal aims to publish high-quality peer-reviewed articles in the area of *Engineering and Technology*. The research published in the journal is practically relevant, so the results are helpful for managers in leadership roles related to projects, programs, and portfolios.

DJES Journal Scope

The Editors reserve the right to reject article(s) without sending them out for review. Submitted papers must be within the scope of the journal. All submitted articles go through a double-anonymized peer-review process. Articles for the regular issue can be submitted electronically throughout the year. The area includes (but is not limited to) the following topics related to *Engineering Sciences*:

- 1. Control Engineering**
- 2. Chemical Engineering**
- 3. Power Electronic Engineering**
- 4. Recent Mechanical Engineering and Technology**
- 5. Advance Civil Engineering and Technology**
- 6. Computer Engineering**
- 7. Internet of Things (IoT)**
- 8. Laser Engineering**
- 9. Microwaves and Photonics**
- 10. Advanced Computer networking Computational Intelligence**
- 11. Communication Engineering**
- 12. Software Engineering and Knowledge Engineering**
- 13. Computer Networks and Inventive Communication Technologies**
- 14. Resent Engineering and Nano Technology**
- 15. Recent Mechanical Engineering and Technology**
- 16. Medical Instruments Engineering**
- 17. Electrical and Electronic Engineering**
- 18. Artificial Intelligent (AI)**

Reviewers Team

We are sincerely grateful to scholars who give their time to peer-review articles submitted to DJES journal. Rigorous peer-review is the corner-stone of high quality academic publishing.”

Reviewers Guideline

The Editorial Office of the respective journal will be notified about your application. Our internal staff will check your research background and any potential conflicts of interest. Should you pass, your application to review will be approved.

* Please note that you can only see and apply to manuscripts in journals where you are a member of the Reviewers Board.

Manuscripts submitted to DJES journals are reviewed by at least two experts, who can be volunteer reviewers, members of the Reviewer Board or reviewers suggested by the academic editor during the preliminary check. Reviewers are asked to evaluate the quality of the manuscript and to provide a recommendation to the external editor on whether a manuscript should be accepted, requires revisions, or should be rejected.

We ask invited reviewers to:

- Accept or decline any invitations as soon as possible (based on the manuscript title and abstract);
- Suggest alternative reviewers if an invitation must be declined;
- Request a deadline extension as soon as possible in case more time is required to provide a comprehensive report.
- Reviewers should hold no conflicts of interest with any of the authors.
- Reviewers should not come from the same institution as the authors.
- Reviewers should not have published together with the authors in the last three years.
- Reviewers should hold a PhD or be MD (applicable for Engineering sciences journals).
- Reviewers should have relevant experience and have a proven publication record in the field of the submitted paper (Scopus, ORCID).

Author Guideline

Article acceptance requirements

The criteria for an article to be accepted for publication include:

1. The article should be original writing that enhances the existing body of knowledge in the given subject area. Original review articles and surveys are acceptable, even if new data/concepts are not presented.
2. Results reported have not been submitted or published elsewhere (although expanded versions of conference publications are eligible for submission).
3. Experiments, statistics, and other analyses are performed to a high technical standard and are described in sufficient detail.
4. Conclusions are presented in an appropriate fashion and are supported by the data.
5. The article is presented in an intelligible fashion and is written in Standard English.
6. Appropriate references to related prior published works must be included.

Checklist for preparing your paper for publication

You can use this list to carry out a final check of your submission before you send it to the journal for review.

1. Is your manuscript adhere to the minimum standards? (written in English; the length of submitted paper is at least 4 pages and no more than 16 pages; use of a tool such as **EndNote**, **Mendeley**, or **Zotero** for **reference management and formatting**, and choose **IEEE** style)
2. Is your manuscript written in **DJES Format**? At this stage, it is essential that you follow every detail of the TELKOMNIKA format. Please try to follow the format as closely as possible.
3. is your title adequate and is your abstract correctly written? The title of paper is max 10 words, without Acronym or abbreviation. The Abstract (MAX 200 WORDS) should be informative and completely **self-explanatory (no citation in abstract)**, provide a clear statement of the **problem**, the **proposed** approach or solution, and point out **major findings** and conclusions.
4. Authors are suggested to present their articles in the sections structure: **Introduction - The Proposed Method/Algorithm/Procedure specifically designed (optional) - Research Method - Results and Discussion – Conclusion**. Authors may present complex proofs of theorems or non-obvious proofs of correctness of algorithms after introduction section (obvious theorems & straightforward proofs of existing theorems are NOT needed).
5. Introduction section: explain the context of the study and state the precise objective. An Introduction should contain the following three parts

- Background: Authors have to make clear what the context is. Ideally, authors should give an idea of the state-of-the art of the field the report is about.

- The Problem: If there was no problem, there would be no reason for writing a manuscript, and definitely no reason for reading it. So, please tell readers why they should proceed reading. Experience shows that for this part a few lines are often sufficient.

- The Proposed Solution: Now and only now! - authors may outline the contribution of the manuscript. Here authors have to make sure readers point out what are the novel aspects of authors work.

6. Authors should place the paper in proper context by citing relevant papers. At least, 10 references (recently journal articles) are used in this section.
7. Method section: the presentation of the experimental methods should be clear and complete in every detail facilitating reproducibility by other scientists.
8. Results and discussion section: The presentation of results should be simple and straightforward in style. This section reports the most important findings, including results of statistical analyses as appropriate and comparisons to other research results. Results given in figures should not be repeated in tables. This is

where the author(s) should explain in words what he/she/they discovered in the research. It should be clearly laid out and in a logical sequence. This section should be supported suitable references.

9. Conclusion section: Summarize sentences the primary outcomes of the study in a paragraph. Are the claims in this section supported by the results, do they seem reasonable? Have the authors indicated how the results relate to expectations and to earlier research? Does the article support or contradict previous theories? Does the conclusion explain how the research has moved the body of scientific knowledge forward?
10. **Language.** If an article is poorly written due to grammatical errors, while it may make it more difficult to understand the science.
11. Please be sure that the manuscript is up to date. **It is expected that 20 to 30% of references are to recent papers.**
12. Is the manuscript clearly written? Is the article exciting? Does the content flow well from one section to another? Please try to keep your manuscript on the proper level. It should be easy to understand by well qualified professionals, but at the same time please avoid describing well known facts (use proper references instead). Often manuscripts receive negative reviews because reviewers are not able to understand the manuscript and this is authors' (not reviewers') fault. Notice, that if reviewers have difficulties, then other readers will face the same problem and there is no reason to publish the manuscript.
13. Do you have enough references? We will usually expect a minimum of 25 to 30 references primarily to journal papers, depending on the length of the paper. Citations of textbooks should be used very rarely and citations to web pages should be avoided. All cited papers should be referenced within the text of the manuscript.
14. Figures and Tables. Relation of Tables or Figures and Text: Because tables and figures supplement the text, all tables and figures should be referenced in the text. Avoid placing figures and tables before their first mention in the text. Authors also must explain what the reader should look for when using the table or figure. Focus only on the important point the reader should draw from them, and leave the details for the reader to examine on her own.

Figures:

- a. All figures appearing in article must be numbered in the order that they appear in the text.
- b. Each figure must have a caption fully explaining the content
- c. Figure captions are presented as a paragraph starting with the figure number i.e. Figure 1, Figure 2, etc
- d. Figure captions appear below the figure
- e. Each figure must be fully cited if taken from another article
- f. all figures must be referred to in the body of the article

Tables:

- a. Material that is tabular in nature must appear in a numbered captioned table.
- b. All tables appearing in article must be numbered in the order that they appear in the text.
- c. Each table must have a caption fully explaining the content with the table number i.e. Table 1, Table 2, etc.
- d. Each column must have a clear and concise heading
- e. Tables are to be presented with single horizontal line under: the table caption, the column headings and at the end of the table.
- f. All tables must be referred to in the body of the article

- g. Each table must be fully cited if taken from another article
15. Each citation should be written in the order of appearance in the text in square brackets. For example, the first citation [1], the second citation [2], and the third and fourth citations [3,4]. When citing multiple sources at once, the preferred method is to list each number separately, in its own brackets, using a comma or dash between numbers, as such: [1], [3], [5] or [4-8]. It is not necessary to mention an author's name, pages used, or date of publication in the in-text citation. Instead, refer to the source with a number in a square bracket, e.g. [9], that will then correspond to the full citation in your reference list. Examples of in-text citations:
- This theory was first put forward in 1970 [9].
 - Sutikno [10] has argued that...
 - Several recent studies [7], [9], [11-15] have suggested that....
 - end of the line for my research [16].
16. Self-citations: to control for citation manipulation, this journal asks that authors keep self-citation to a minimum. We would strongly recommend no more than 5 (including jointly authored publications), or **20% self-citations, whichever number is lower**.
17. Please be aware that for the final submission of regular paper you will be asked to tailor your paper so the last page is not half empty.

Authorship

Authorship provides credit for a researcher's contributions to a study and carries accountability.

DJES considers individuals who meet all of the following criteria to be authors:

- Made a significant intellectual contribution to the theoretical development, system or experimental design, prototype development, and/or the analysis and interpretation of data associated with the work contained in the article.
- Contributed to drafting the article or reviewing and/or revising it for intellectual content.
- Approved the final version of the article as accepted for publication, including references.

Each author has approved the submitted version (and any substantially modified version that involves the author's contribution to the study).

Each author has agreed both to be personally accountable for the author's own contributions and to ensure that questions related to the accuracy or integrity of any part of the work, even ones in which the author was not personally involved, are appropriately investigated, resolved, and the resolution documented in the literature.

DJES does not require all authors of a research paper to sign the letter of submission, nor do they impose an order on the list of authors. Submission to IDEA is taken to mean that all the listed authors have agreed all of the contents, including the author list and author contribution statements. The corresponding author is responsible for having ensured that this agreement has been reached that all authors have agreed to be so listed, and have approved the manuscript submission to the journal, and for managing all communication between the journal and all co-authors, before and after publication. The corresponding author is also responsible for submitting a competing interests' statement on behalf of all authors of the paper.

It is expected that the corresponding author (and on multi-group collaborations, at least one member of each collaborating group, usually the most senior member of each submitting group or team, who accepts responsibility for the contributions to the manuscript from that team) will be responsible for the following with respect to data, code and materials:

- ensuring that data, materials, and code comply with transparency and reproducibility standards of the field and journal;

- ensuring that original data/materials/code upon which the submission is based are preserved following best practices in the field so that they are retrievable for reanalysis;
- confirming that data/materials/code presentation accurately reflects the original;
- foreseeing and minimizing obstacles to the sharing of data/materials/code described in the work
- ensuring that all authors (or group leaders in multi-lab collaborations) have certified the author list and author contributions

Author lists should be carefully considered before submission. At submission, the corresponding author must include written permission from the authors of the work concerned for mention of any unpublished material cited in the manuscript (for example others' data, in press manuscripts, personal communications or work in preparation). The corresponding author also must clearly identify at submission any material within the manuscript (such as figures) that has been published previously elsewhere and provide written permission from authors of the prior work and/or publishers, as appropriate, for the re-use of such material.

After acceptance, the corresponding author is responsible for the accuracy of all content in the proof, including the names of coauthors, addresses and affiliations. **Changes to author list post acceptance are not allowed.**

After publication, the corresponding author is the point of contact for queries about the published paper. It is their responsibility to inform all co-authors of any matters arising in relation to the published paper and to ensure such matters are dealt with promptly. Authors of published material have a responsibility to inform the journal immediately if they become aware of any aspects that requires correction.

Any changes to the author list after submission, such as a change in the order of the authors or the deletion or addition of authors, must be approved by every author. **DJES** editors are not in a position to investigate or adjudicate authorship disputes before or after publication. Such disagreements, if they cannot be resolved amongst authors, should be directed to the relevant institutional authority.

The primary affiliation for each author should be the institution where the majority of their work was done. If an author has subsequently moved, the current address may also be stated.

Withdrawal of Manuscripts

Author is not allowed to withdraw submitted manuscripts, because the withdrawal is a waste of valuable resources that editors and referees spent a great deal of time processing submitted manuscripts, money and works invested by the publisher.

If the author still requests withdrawal of his/her manuscript when the manuscript is still in the peer-reviewing process, the author will be punished with paying \$200 per manuscript, as withdrawal penalty to the publisher. However, it is unethical to withdraw a submitted manuscript from one journal if accepted by another journal. The withdrawal of manuscript after the manuscript is accepted for publication, the author will be punished by paying US\$500 per manuscript. Withdrawal of an accepted manuscript is only allowed after withdrawal penalty has been fully paid to the Publisher. If the author doesn't agree to pay the penalty, the author and his/her affiliation will be blacklisted for publication in this journal in future. Even his/her previously published articles will be removed from our online system.

Retraction and Correction policies

Withdrawing an already published paper is called a Retraction. A published article is a scientific record and we cannot make any changes without publishing a corrigendum. Dijlah University takes its responsibility to maintain the integrity and completeness of the scholarly record of our content for all end users very seriously. Changes to articles after they have been published online may only be made under the circumstances outlined below. UAD

places great importance on the authority of articles after they have been published and our policy is based on best practice in the academic publishing community. An Erratum is a statement by the authors of the original paper that briefly describes any correction(s) resulting from errors or omissions. Any effects on the conclusions of the paper should be noted. The corrected article is not removed from the online journal, but notice of erratum is given. The Erratum is made freely available to all readers and is linked to the corrected article. A Retraction is a notice that the paper should not be regarded as part of the scientific literature. Retractions are issued if there is clear evidence that the findings are unreliable, this can be as a result of misconduct or honest error; if the findings have previously been published elsewhere without proper referencing, permission or justification; if the work is plagiarized; or if the work reports unethical research. To protect the integrity of the record, the retracted article is not removed from the online journal, but notice of retraction is given, is made freely available to all readers, and is linked to the retracted article. Retractions can be published by the authors when they have discovered substantial scientific errors; in other cases, the Editors or Publisher may conclude that retraction is appropriate. In all cases, the retraction indicates the reason for the action and who is responsible for the decision. If a retraction is made without the unanimous agreement of the authors, that is also noted. In rare and extreme cases involving legal infringement, the Publisher may redact or remove an article. Bibliographic information about the article will be retained to ensure the integrity of the scientific record. A Publisher's Note notifies readers that an article has been corrected subsequent to publication. It is issued by the Publisher and is used in cases where typographical or production errors (which are the fault of the Publisher) affect the integrity of the article metadata (such as title, author list or byline) or will significantly impact the readers' ability to comprehend the article. The original article is removed and replaced with a corrected version. Publisher's Notes are freely available to all readers. Minor errors that do not affect the integrity of the metadata or a reader's ability to understand an article and that do not involve a scientific error or omission will be corrected at the discretion of the Publisher. In such a case, the original article is removed and replaced with a corrected version. The date the correction is made is noted on the corrected article. Authors should also be aware that an original article can only be removed and replaced with a corrected version less than one year after the original publication date. Corrections to an article which has a publication date that is older than one year will only be documented by a Publisher's Note.

Publication Ethics

This statement clarifies ethical behavior of all parties involved in the act of publishing an article in our journals, including the authors, the editors, the peer-reviewers and the publisher (*University of Dijlah*)

Ethical Guideline for Journal Publication

The publication of an article in peer-reviewed **DJES** Journals is an essential building block in the development of a coherent and respected network of knowledge. It is a direct reflection of the quality of the work of the authors and the institutions that support them. Peer-reviewed articles support and embody the scientific method. It is therefore important to agree upon standards of expected ethical behavior for all parties involved in the act of publishing: the authors, the journal editors, the peer reviewers, the publisher and the society.

DJES as publisher of this Journal takes its duties of guardianship over all stages of publishing extremely seriously and we recognize our ethical and other responsibilities. We are committed to ensuring that advertising, reprint or other commercial revenue has no impact or influence on editorial decisions. In addition, the **DJES** and Editorial Board will assist in communications with other journals and/or publishers where this is useful and necessary.

Publication decisions

The editors of the DJES journals are responsible for deciding which of the articles submitted to the journal should be published. The validation of the work in question and its importance to researchers and readers must always drive such decisions. The editors may be guided by the policies of the journal's editorial board and constrained by such legal requirements as shall then be in force regarding libel, copyright infringement and plagiarism. The editors may confer with other editors or reviewers in making this decision.

Fair play

An editor at any time evaluate manuscripts for their intellectual content without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.

Confidentiality

The editor and any editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher, as appropriate.

Ethical Approval Code (EAC)

EAC is required for all studies on Engineering Science. The code must be approved by author's local authorities.

All researches involving human participants and/or human issues require ethical approval (EA) by DJES Research Ethics Committees (REC).

By obtaining EA, the researcher is demonstrating that they have adhered to the accepted ethical standards of a genuine research study.

If EA has not been obtained, the individual researcher bears personal responsibility for claims that may be made.

Ethical Approval Format

As the researchers of the project entitled -----

Submitted by -----

We confirm that all researches ethical issues have been dealt with in accordance with the DJES policy and research ethical guidelines of relevant professional organisation.

Name and Signature of the author:

	<u>Name</u>	<u>Signature</u>	<u>Date</u>
1-			
2-			
3-			

Intellectual Property Rights of Authors (IPRA)

IPRA refers to the legal rights given to the author to protect his research creation for certain period of time.

Dijlah Journal of Engineering Sciences (DJES) considering the significance of IPRA protection, it is essential to foster communication among policymakers, academics, and publishers. This collaboration is crucial for deepening the understanding and research on intellectual property, ultimately advancing the development of this emerging field.

The journal features a range of content, including contributed and invited articles, case studies, as well as patent reviews and literature.

DJES provide exclusive rights to the creators and authors of the research and enable them to reap commercial benefits for their creative efforts or reputation. Several sort of property protection will be use by the journal, such as patent, copyright, etc.

Manuscript Acceptance Letter

Dears:

I'm pleased to inform you that your manuscript, entitled "-----

" has been reviewed and accepted by our Journal Editorial Board.

The manuscript will be published in the forthcoming issue of Dijlah Journal of Engineering Sciences.

Thank you for choosing to publish in our journal.

Best regards

Editor in chief
Asst. Prof. Dr. Majid Salal Naghmash
Dijlah Journal of Engineering Sciences
Dijlah University

TABLE OF CONTENTS

N0.	Paper Title	pages	Authors
1	Diabetes Estimation using Machine Learning Techniques	1-10	Arkan Adnan Imran, Aya Khalid Hadi, Noor Najah Ali, Diana S. Obaid
2	Attendance System using Face Recognition Techniques and GSM	11-21	Mohammed Wajeeh Hussein Alameen, Yasmeen M. Hussein, Ali Mohammed Kadhim, Fawzi M. Mustafa
3	Implement of Substitution Boxes for DES Based Field Programming Gate Array and VHDL	22-32	Jabbar S. Jahlool ¹ , Nazar J. Hussain ² , Ali M. Kadhim ³ , Ali Alsahhi ⁴
4	Nano-Particles Zinc Oxide for Water Cleaning	33-45	Nor Adilah Mohd Ali ¹ , Nur Adrinna Nor Arifin ¹ , Jumaah Noaman Salman ^{2*}
5	Integrated Pavement Design: Peripheral Facade Function in Relation to Urban Beauty and Building Needs	46-58	
6	The Role of Cloud Technologies in Improving Enterprise Data Management: A Case Study of Intelligent Business Applications	59-71	Hind Khalid
7	Analysis and Simulation of Power Stage Voltage Controller Model Using Feedback Compensator	72-80	Ola Hussein Abd Ali
8	Effects of Heat Transfer and Concentration on Peristaltic Ree-Eyring Fluid Flow in a Symmetric Channel with Square and Triangular Boundaries	81-98	Fatima K. Abdullah ¹ , Ahmed M. Abdulhadi ²

9	The Interconnection of Open Systems Resolution of OSI Levels and the Dilemma of Discrete Energy in Security and Legal	99-107	Nazar Jabbar Alhyani ¹ , Oday Kamil Hamid ² , Ali Mohammed Kadhim ³
10	Classification of Data Types Passing through the Network using Deep Learning	108-118	Hashim Dia'a Hashim Al Noimy ¹ , Tiba Dia'a Hashim Al Noimy ²
11	Detecting malicious data using deep learning	119-130	Hashim Dia'a Hashim Al Noimy ¹ , Tiba Dia'a Hashim Al Noimy ²
